

Sales Representative Manual: New Customer Creation

As a Sales Representative, you will use the Sales Portal to submit new customer requests. The portal ensures all necessary logistical and accounting information is captured before the account is built in NetSuite.

1. Accessing the Form

Log in to the Zaks Sales Portal and click on the **New Customer** button or navigate to the New Customer page.

2. Filling out the Application

Please ensure the following fields are filled out accurately:

- **Company Name (NetSuite):** The main "Doing Business As" (DBA) name of the store. This is how it will appear on invoices and in the system.
- **Legal Name:** The official registered legal entity name of the corporation.
- **Shipping & Logistics:** Provide the full address. **Note:** Ensure the correct Canadian Province or Territory is selected from the dropdown list. The Country is locked to Canada by default.
- **Categorization:** Select the appropriate **Banner**, **Channel**, and **Price Level**. (Price Level defaults to *Store*).
- **Sales Rep:** Select your own name from the dropdown.
- **Contacts:**
 - **Primary Contact:** The main day-to-day contact for the store (requires First Name, Last Name, Email, and Phone).
 - **Accounts Payable (AP) Contact:** The person or department responsible for paying invoices. It is critical to get accurate First Name, Last Name, Email, and Phone information here for the accounting team.

3. Submission & Workflow

When you click **Create Customer Request**, the following happens automatically:

1. The request is securely saved in the portal's pending database.
2. A system email is generated and sent to the Administration team.
3. This email contains a formatted **PDF Summary** for quick review and a **CSV Data File** containing the exact data needed for NetSuite.

Your job is done! The Admin team will review the request and officially open the account in NetSuite. Once activated, the new customer will automatically appear in your portal list during the next nightly sync.
